Philosophy

I believe one can only truly succeed at something if they put their 100% into it. Hence why I continue to work daily with maximum effort and attention, even down to the tiniest details. I am always looking for ways to make things better, making tasks more efficient, always **eager to learn new technologies** in the ever changing and rapidly moving tech industry, putting these findings to use in my work to **ensure a high quality outcome** for every client I work with. Most importantly however, is that **I love what I do**.

Experience

Software Developer, IT, Client Acquisition/Relations, Finance; BowersDev – 2015-Present

In 2015 I solo founded Bowers Development, a website development agency that I currently still manage, handling all aspects of the running of the business. With regards to the client projects, I mainly work with websites for small to medium sized businesses, using HTML, CSS, Javascript and jQuery for frontend UI development and NodeJS and PHP for server side development.

Lead Website Developer; Reelum Media, Greater London – 2018-Present

Reelum Media is a team working to provide digital solutions to companies in the Greater London area. It is my responsibility to handle the website development for our clients, working closely with them to ensure their every request is met with the upmost of quality.

Manager, Lead Website Developer; Collateral Esports – 2017-2018

At Collateral, I travelled the country with the gaming team, ensuring they were at their events at the right time, organising them media opportunities along the way. We worked closely together creating a healthy working environment, as well as building up team working and management skills. I also run the website development team for Collateral, ensuring tasks are completed on time and ensuring the consistent upkeep of a complex statistics tracking site with server side, front end and database aspects.

iOS Developer Intern; AllOfUs, London – August 2016

This was a great opportunity for me to gain experience in an IT based workplace, requiring me to manage my time well when commuting between Chelmsford and London each day. I helped research various projects, before conversing back with the team of professionals to ensure we were all on the same lines. This was a perfect opportunity for me to understand the important of working with those around me. Since we worked in numerous projects during my time at AllOfUs, it was essential that I could switch between tasks, while maintaining consistent focus.
